WHY USE 10-MINUTE COLOUR?

- 1 To optimise salon appointments and significantly reduce the time spent on treatment.
- 2 To limit the use of heat tools that incorrectly speed up the development of traditional colouring.
- 3 To respond professionally to customers who need to reduce the leave-in time while guaranteeing a high-performing result.
- 4 To broaden the salon service menu with quick and easy touch-ups.

Step 1 / DIAGNOSIS

Diagnose and identify the level and shade suitable for application.

Step 2 / MIXING

Prepare the selected colour in a non-metallic bowl in a 1:1 ratio with Dev Plus oxidant at 10, 20 or 30 volumes depending on the porosity of the hair and the end goal.

Step 3 / APPLICATION

Apply the colour to the regrowth starting with the areas with the highest concentration of white hair. Leave on for 10 minutes.

Step 4 / RINSE

At the end of the application time, massage in and proceed with washing.
